Report

Of

Full Stack Web Application Development Using Java Technologies

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech CSE

By

Roll Number of Student: CS-23411328

Name of Student: Lakshya

Section: 4CSE13

Batch: 2026-27

CANDIDATE'S DECLARATION

I, Lakshya declare that the internship report titled “Full Stack Web Application Development Using Java Technologies” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. All the references have been quoted and I have not taken as such any material from any other source. I affirm that this report is my own work and has not been submitted to any other institute for any degree/diploma requirement, and I shall be solely responsible for any kind of copyright violation in this regard.

Student Name: Lakshya

Roll No.: CS-23411328

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program at The Skybrisk. I am thankful for their aspiring guidance, invaluably constructive criticism and friendly advice during this work. I am sincerely grateful to my mentors and to Mr. Govind Bhokare, Founder & CEO of The Skybrisk, for the opportunity and support extended to me during the internship. I would also like to thank my faculty at IILM University for their continuous guidance and encouragement throughout this internship.

I express my gratitude to my parents for their blessings.

Chapter 4: Project Description

4.1 Introduction

This report presents an account of the internship undertaken at The Skybrisk as a Full Stack Java Developer Intern, over a duration of one month (Remote), from 20-06-2026 to 20-07-2026. The internship provided hands-on exposure to full stack Java development, working alongside experienced mentors on real project tasks combined with structured technical training. Program highlights included hands-on experience in full stack Java development, real-world project exposure, mentorship and training resources, project tasks with regular assessments, and performance-based evaluation. This chapter describes the organization, the problem addressed, the objectives pursued, the technologies used, and the methodology followed during the internship.

4.2 Organization Profile

The Skybrisk is a technology-driven organization that emphasizes hands-on, real-world work for its interns. Every internship at The Skybrisk is structured around practical project tasks, dedicated mentorship from experienced engineers, and a clear framework of milestones and feedback, with the objective of building both technical competence and professional discipline in its interns. The organization is led by Mr. Govind Bhokare, Founder & CEO of The Skybrisk, and offers remote internship tracks across technology domains, including full stack Java development.

4.3 Problem Statement

Organizations increasingly require web-based systems that are reliable, maintainable, and capable of handling end-to-end business workflows through a single, cohesive application rather than a set of disconnected tools. Manual or fragmented processes make it difficult to manage data consistently, track activity, and scale operations as requirements grow. The project undertaken during this internship addressed the need for a full stack web application, built using Java-based technologies, that could manage core data and operations for its intended use case through a structured front-end interface, a robust back-end, and a persistent database, thereby streamlining the underlying workflow and reducing manual effort.

4.4 Project Objectives

- To gain practical exposure to full stack Java development in a professional, project-driven environment.
- To design and develop the front-end, back-end, and database layers of a functional web application.
- To apply structured software development practices, including requirement analysis, coding standards, and version control, under mentor guidance.
- To implement core modules such as user management, data entry, and record handling within the application.
- To evaluate and validate the developed solution against the defined project requirements.

4.5 Scope of the Project

The scope of the project covers the design and development of a web-based application, including the front-end user interface, back-end business logic and services, and database integration, within the one-month internship period. The project focused on implementing core functional modules end-to-end rather than an exhaustive feature set, so that the complete development lifecycle — from requirement understanding to a working, testable application — could be demonstrated. Aspects such as large-scale deployment, load testing, and advanced security hardening were outside the scope of this internship-level project.

4.6 Technologies and Tools Used

- Programming Language: Java
- Front-End: HTML, CSS, JavaScript
- Back-End: Java (Spring Boot)
- Database: MySQL
- Tools: Git & GitHub, Visual Studio Code / Eclipse IDE, Maven, Postman

4.7 System Architecture

The application follows a layered architecture consisting of a presentation layer, a service (business logic) layer, and a data access layer connected to a relational database. The presentation layer, built with HTML, CSS, and JavaScript, handles user interaction and sends requests to the back-end. The back-end, developed using Java and Spring Boot, exposes REST endpoints that process requests, apply business rules, and communicate with the database through a data access layer. The MySQL database stores and persists application data. This separation of concerns makes the system easier to maintain, test, and extend (Figure 4.1).

Figure 4.1: High-level system architecture of the application (Front-End → Back-End/REST API → Database)

4.8 Methodology

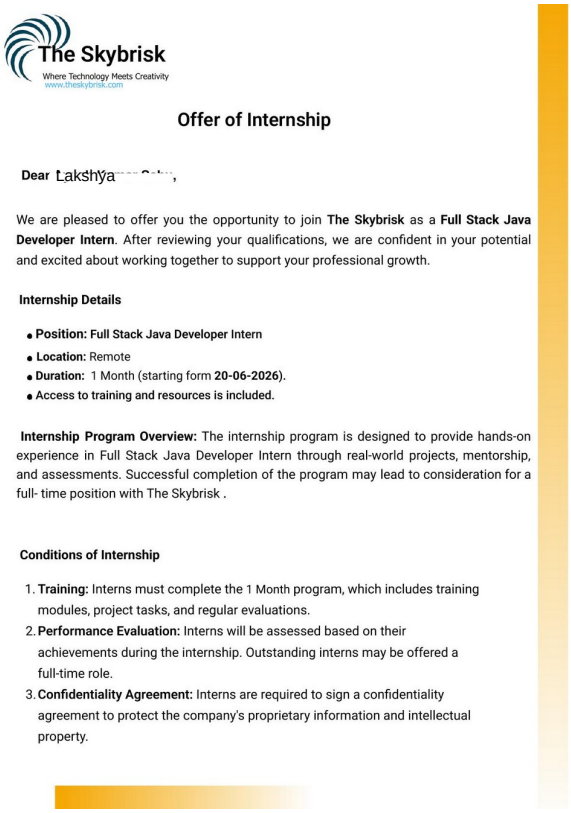

The internship followed a structured methodology consisting of onboarding, training modules, project tasks, and periodic evaluations. During the onboarding phase, the intern was introduced to the mentor and provided with a training schedule. This was followed by structured technical training modules covering core Java concepts, Spring Boot, and full stack application development, after which the acquired skills were applied to real, hands-on project tasks. Development proceeded through requirement analysis, module-wise design, incremental coding of the front-end and back-end components, integration with the database, and functional testing of each module before it was reviewed. Throughout the program, the intern focused on problem-solving within a standard software development workflow, and regular check-ins and performance assessments were conducted by the mentor to track progress and provide feedback.

4.9 Expected Outcomes

Through this internship, the following outcomes were achieved: a working understanding of core Java development concepts and full stack application development using Spring Boot and MySQL; practical experience solving problems within a professional software development workflow, including coding, debugging, and testing; and professional growth through mentorship, project tasks, and periodic assessment. Successful completion of the program demonstrates practical internship experience in full stack Java development, and outstanding performance during the internship may lead to consideration for a full-time role at The Skybrisk.

4.10 Certificates of Completion and Other Communication Mail Proof

The Internship Completion Certificate issued by The Skybrisk is provided in the front matter of this report (page iii). The offer of internship confirming the role, duration, and terms of the internship is attached below as supporting communication proof.

Offer of Internship

Dear Lakshya[illegible],

We are pleased to offer you the opportunity to join **The Skybrisk** as a **Full Stack Java Developer Intern**. After reviewing your qualifications, we are confident in your potential and excited about working together to support your professional growth.

Internship Details

- **Position: Full Stack Java Developer Intern**
- **Location:** Remote
- **Duration:** 1 Month (starting form **20-06-2026**).
- **Access to training and resources is included.**

Internship Program Overview: The internship program is designed to provide hands-on experience in Full Stack Java Developer Intern through real-world projects, mentorship, and assessments. Successful completion of the program may lead to consideration for a full- time position with The Skybrisk .

Conditions of Internship

1. **Training:** Interns must complete the 1 Month program, which includes training modules, project tasks, and regular evaluations.
2. **Performance Evaluation:** Interns will be assessed based on their achievements during the internship. Outstanding interns may be offered a full-time role.
3. **Confidentiality Agreement:** Interns are required to sign a confidentiality agreement to protect the company's proprietary information and intellectual property.

How to Accept the Offer

To confirm your acceptance of this offer, reply to this email. Once confirmed, you will receive onboarding details, including your training schedule and start date.

We look forward to having you on board and helping you build your expertise during this internship. Should you have any questions, feel free to contact us at your earliest convenience.

Once again, congratulations on your selection!

Govind Bhokare
Founder & CEO
